^a Product has passed the [Interagency Grizzly Bear Committee Testing Program](#) (IGBTP) with captive bears at the Living with Wildlife Foundation.

^b The “Estimated Cost per Container” column is showing = amount for shipping divided by (+) the minimum amount that has to be purchased plus (+) the price per container. Therefore, it is showing the cost of *one* can. Each company has their own minimum order of cans that must be purchased. Hence, the price provided in the last column is NOT the total cost of the full order.

^c Costs depend on the number of cans being purchased (shipping costs decreases the more cans purchased); all final prices depend on the number of cans bought, price of gas at the moment of shipping, and the area where it is being shipped.
